

### **How should I clean the surface of my vent hood?**

---

Most stainless steel appliance and countertop sprays found at Home Depot, Lowes and many grocery stores are a good choice for cleaning your vent hood. They leave a nice luster in addition to cleaning the surface and leaving an additional layer of protection. While standard cleaners such as 409 and Fantastic are fine, they tend to leave a slightly dull finish. Products that contain ammonia, vinegar, and anything generally acidic should be avoided.

When cleaning or wiping down your vent hood, use only a soft cloth. Even paper towels, over time, will wear through the sealant. Always avoid the use of abrasives and strong cleaners.

### **How should I clean my filter?**

---

Our premier baffle filters are designed to last the lifetime of your vent hood providing an eco-friendly solution to disposable filters.

To clean your filter, simply remove the filter from the liner of your vent hood by unscrewing the sides to separate the filter into two halves for access to the baffle interior and grease trap. Wash with a soft sponge, soap and hot water as needed. Avoid scrubbing or using abrasives on the outside of the bottom baffles, as this will remove the finish. Products that contain ammonia, vinegar, and anything generally acidic should be avoided.
